

Task :

Python Introduction (Basic Understanding)

1 ☐ 1What is Python?

python is High Level, Interpreted, Platform independent, Dynamically typed language that is easy to understand and learn, it supports OOPS

2 ☐ 2Is Python case-sensitive?

Yes, Python is case-sensitive.

Ex: name and Name are treated as different variables.

3 ☐ 3What is the extension of a Python file?

Python files use the extension: .py

4 ☐ 4Who created Python?

Python was created by Guido van Rossum

5 ☐ 5Is Python compiled or interpreted?

Python is mainly an interpreted language, but it actually works in a hybrid way:

. First, it is compiled into bytecode

. Then, it is interpreted by the Python Virtual Machine (PVM)

☐ PART 2: Variables & Rules

6 ☐ 6What is a variable in Python?

A variable is a name used to store data (value) in memory.

Ex: x=10

7 ☐ Write a variable to store your name.

name="sanjana"

8 ☐ Can a variable name start with a number?

No, a variable name cannot start with a number.

9 ☐ Which is valid: `my_name` or `my-name`?

`my_name` is valid

10 ☐ Is `Age` and `age` same variable?

No, they are different variables (Python is case-sensitive).

11 ☐ Identify the invalid variable name:

- 1name
- name_1
- _name
- name\$

ans. 1name, name\$

12 ☐ Write variables to store:

- Age
- Salary
- City

Ans:age=18

salary=5000

city="hyderabad"

13 ☐ What happens if you assign new value to same variable?

The old value gets replaced (overwritten) by the new value.

14 ☐ Can we use Python keywords as variable names?

No, we cannot use Python keywords as variable names.
